Respected Sir,

This is with respect to your mail regarding the suggestion given by Reecha Sharma that small industrial units can be setup to make disposables from stubble as an alternative to thermocol.

The suggestion given is appreciated and it can be useful in stoppage of stubble burning and providing alternate income to the farmers.

In order to further develop on the idea, you are requested to provide further details of the project alongwith techno-commercial feasibility. It will certainly help in development of the alternate use of stubble in the State of Punjab.

With Regards
